```java
public class swapping {

        public static void main(String args[]) {

    int a = 10;
    int b = 20;

    a = a+b;
    System.out.println("here a is : "+a);

    b = a-b;

    System.out.println("here b is : "+b);

    a = a-b;

    System.out.println("here a is : "+a);

    System.out.println ("final values of a and b are :" + "a = " +a + "b=" +
+b);
        }

}
```
